SUMMARY

B.Tech student in Artificial Intelligence and Data Science with a solid foundation in C++, Python and data structures, building full-stack and backend applications. Currently developing **ToolForge**, an AI tool marketplace built with React.js and Node.js, and **Campus Automation System**, a FastAPI-based campus automation platform. Seeking a software engineering internship to build reliable, scalable products.

EDUCATION

MBM University — Jodhpur, Rajasthan
B.Tech in Artificial Intelligence and Data Science — Expected Graduation: 2029

TECHNICAL SKILLS

Languages	C++, C, Python, JavaScript
Frontend	React.js, HTML, CSS
Backend	Node.js, Express.js, FastAPI, REST APIs
Databases	SQL, SQLite
Tools	Git, GitHub, VS Code
Core CS	Data Structures and Algorithms (DSA), Object-Oriented Programming (OOP), Problem Solving

PROJECTS

ToolForge | *AI Tool Marketplace* — React.js, Node.js, Express.js

- Building a full-stack marketplace where users discover and run AI-powered tools directly inside the platform instead of visiting external links.
- Designing a schema-driven tool model with a centralized execution engine, so new tools can be added through configuration rather than custom pages, with AI provider keys kept server-side.
- Planning a workflow composition layer that chains multiple AI tools into reusable multi-step sequences, with creator-published tools and AI agents as the long-term direction.

Campus Automation System (MARVEL) — Python, FastAPI, SQLite

- Developing an integrated platform that digitizes college operations across student, faculty, academic and administrative services.
- Building backend APIs with FastAPI and persistent storage in SQLite, including authentication-related functionality.
- Structuring modules around core campus workflows such as attendance, academic scheduling, student services and administration.

PROBLEM SOLVING

Practicing Data Structures and Algorithms in C++ on LeetCode: leetcode.com/u/ruet_29
